

Isabel Ordás Arnal

Product Manager with a software development background, building the climate future from within.

Remote (Spain, CET/CEST) | isaordas@gmail.com | +34 606 75 51 14 | linkedin.com/in/iordas

Professional Summary

Product Manager in career transition, with 15+ years building digital products across telecom, enterprise retail, and sustainability-focused platforms — most recently as a Senior Software Engineer & Product Contributor at ClimateTrade's carbon credit marketplace. Completed a Master's in Digital Product Management (Nuclio Digital School) and Terra.do's Climate Change: Learning for Action fellowship (currently in Terra.do Studio). Brings a genuinely AI-native way of working — using AI as a thinking partner, through agentic workflows, and via iterative prompt/loop engineering — to product discovery and delivery, alongside a technical depth that lets me sit with engineering as a peer and catch risks before they land in production.

Core Skills

Product Discovery & User Research · Problem Framing & Prioritisation · Cross-Functional Leadership (Eng, Design, Business) · Data-Driven Decision Making (SQL) · Stakeholder Management · Climate & Sustainability Domain Interest · PRD Writing & Metrics Design · Agile & Iterative Delivery · AI-Native Working Style — Thinking Partner, Agentic Workflows, Prompt/Loop Engineering · Google Suite & Microsoft Office

Professional Experience

Product & Climate Transition — Independent Professional Development *2025 – Present*

- Completed a Master's in Digital Product Management (Nuclio Digital School) and Terra.do's Climate Change: Learning for Action fellowship, and currently completing Terra.do Studio (Aug 2026 – Sep 2026), deepening formal grounding in product strategy and climate systems ahead of a full-time transition into product roles.
- Built an AI-native way of working across three layers: using AI as a thinking partner for strategic and analytical decisions, designing agentic workflows to automate repetitive tasks, and applying iterative prompt/loop engineering to refine outputs.

Senior Software Engineer & Product Contributor — ClimateTrade *Sep 2022 – Apr 2025 | Remote*

- Analysed B2C marketplace funnel data using SQL to identify customer drop-off points and behaviour patterns, translating findings into actionable recommendations that shaped product and business priorities.
- Made explicit feature prioritisation calls — assessing implementation complexity against user benefit and redirecting engineering capacity toward higher-impact work, including a deliberate decision to deprioritise Google login integration in favour of higher-value features.
- Contributed to a blockchain-based carbon credit marketplace — B2B API for corporate integrators and a B2C sustainability marketplace — gaining hands-on exposure to product decisions in a climate-focused platform.
- Piloted early AI-assisted workflows across the team, contributing to an estimated 25% reduction in development time and ~50% faster log analysis.

Software Engineer & Product Coordinator — Gunnebo *Feb 2018 – Sep 2022 | Binéfar, Huesca*

- Prioritised a complex feature backlog by balancing client value, technical feasibility, and team capacity, delivering enterprise platform customisations on schedule without compromising quality.
- Owned end-to-end release quality — designing acceptance criteria, running functional and regression testing, and coordinating cross-functional sign-off before each production release.
- Managed stakeholder communication across client and engineering teams, maintaining alignment on scope, timeline, and trade-offs throughout all delivery phases.

Education

Terra.do Studio — Terra.do *Aug 2026 – Sep 2026 (in progress)*

Climate Change: Learning for Action (Fellowship) — Terra.do *Jan 2026 – Apr 2026*

Master's in Digital Product Management — Nuclio Digital School *Apr 2025 – Nov 2025*

Master's in AI for Developers — LIDR.co | AI-Powered Careers *Feb 2024 – Sep 2024*

Telecommunications Engineering — Universidad de Zaragoza
